Perusal Score

### General Notes:

- This piece was originally composed with the acoustics of the Vancouver Art Gallery Rotunda in mind. It is quite a reverberant space, with a curiously high level of low frequency noise (perhaps the shape of the rotunda serves to draw in and amplify the sounds occurring throughout the building). There are many instances in which the instruments are intended to "chase" their own decay, creating a sort of continuity of sound not obvious in the written score. The performers are therefore asked to pay as much attention to the reverberation in the space as possible during the performance. And it goes without saying that subsequent performances are best programmed in "lively" acoustic spaces (though a similar, and quite interesting effect could also be achieved in a dry space using amplification and digital or "sampled" reverb).

- Dynamic markings indicated as ppp (pos.) are intended to be played as softly as possible, in such a way as to reveal the internal workings of the instrument. When such markings occur at high or low registers, it is my intention that difficulties in maintaining tone be audible. Effort should be made to negotiate the balance between maintaining tone quality and revealing the limits of the instrument's physical capabilities.

- In the Flute part, there are some instances of consonant sounds used during the attack portion, and of vowels used to alter the shape of the oral cavity. The symbols are the standard phonetic symbols.

#### Consonants:

*f* - as in shout

*tf* - as in change

*f* - as in flame

*k* - as in kinetic

#### Vowels:

Å - as in bought

- In certain places, dynamics are given with an indication of relative levels within the ensemble, e.g.:

pp (= Cl.)      mf (<Bsn.)      ff (>Fl.)

These markings indicate: "pp, and balanced with Clarinet", "mf, but supporting the Bassoon", and "ff, but slightly louder than the Flute", respectively. The intention here is to help clarify subjective levels, independently of register or dynamic. In the case of crescendo or decrescendo markings from silence, there are instances where no specific dynamic is given, but only a relative level in the ensemble, e.g.:

(= Ob.)    or    (<Fl.)

Again, the intention is to give a relative destination for the hairpin – in the second example, the level is interpreted as "just below the Flute."

James B. Maxwell  
2005-2006

♩ = 90 approx.

The numbered fragments are to be played during the entrance. Fragment 1) is to be played first, but any order can be chosen thereafter. If you are comfortable walking while playing, do so, otherwise the fragments can be separated by walking. You have approximately 1' 30" to reach the performance space, ready for the beginning of the piece. Fragments can be played at any dynamic from ppp to mp, can be repeated from any point, and do not need to be played to completion. The fragments given to Fl., Ob., Cl., and Bsn., accompany a solo in the Horn, which is alone in the performance space.

1) Start cue is peak of Hn. cresc.
